

KICKER GRAIN TESTERS

CATCH THAT UNCLAIMED FM/DOCKAGE IN YOUR GRAIN AND KICK UP YOUR PROFIT!

DESCRIPTION:

The MCI Kicker is designed to provide a fast, accurate and consistent way of obtaining the following fractions from grain: shrunk & broken, overs or scalplings, clean grain, broken grain, fines (thru's) or malt and barley sizes. The MCI Kicker can generate these fractions in approximately 30-45 seconds, depending on the sample size. These fractions can then be weighed and calculated to provide you with the correct Dockage and SB/Broken. Most of the FM that is present in your grain sample will be removed. Other FM will need to be hand picked, but the amount to hand pick through is drastically reduced, compared to other methods.

The MCI Kicker simply requires the operator to start the system with the throw of a switch, input a sample into the machine, and wait approximately 30-45 seconds. During the short wait, all the different fractions are separated and delivered to the separated

fraction retrieval pans for your inspection and usage.

The MCI Kicker has proven that it can save much valuable labor time, which allows a much higher flow through traffic at your scale. The MCI Kicker also provides very accurate and consistent results that eliminate any questioning of hand pan results.

Some of the most important features of the MCI Kicker, and backed up by its users, are quietness, cleanliness, and integrated sieve cleaning system. The MCI Kicker operates so quietly and cleanly you don't have to stop what you are doing in the room, like take phone calls, talk to customers, etc. Due to the aspirated dust collection system, it will not produce excessive grain dust that covers your desk and counter tops. Due to the integrated sieve cleaning system, the MCI Kicker continually works consistently every time, as well as virtually eliminating the need for removing and cleaning the sieves.
