

2 - 6 TAGGERS

The tagger machine has the capability of placing 2 -6 tags per bag depending on which machine is purchased. The machine has a dispenser for each tag. Each dispenser has a magazine that holds a large quantity of individual tags.

The dispensers can handle practically any type of tag.

Adjustment between tag size and material is done quickly and easily without the use of any tools. The tags are dispensed one by one, then stacked on top of each other followed by being aligned.

The last step in the process is to feed the tags into the sewing machine in-feed. The process is completely stand alone and fully automatic.

- 1 to 6 tags per bag
- Up to 24 tags per minute

CAPACITY

Up to 20 cycles per minute
