

These hammer mills are designed for superior performance in even for the most demanding applications. Their rugged construction and flexible configurations promise the perfect grind, every time, for any application.

Medium Production Full Circle Screen Hammer Mill

The 22 Series is a high speed, mid-range production, full circle screen hammer mill designed for efficiently processing agricultural products, feed and grain, light wood waste, and other relatively easy to grind materials. The nearly full circle screen coverage of the rotor translates to a larger screen open area and thus the highest possible production rates on materials that do not require initial grinding against a breaker plate.

These mills feature heavy duty housing designed to minimize noise and vibration, sliding doors that offer full access to the grinding chamber, and versatile hammer styles with flexible configurations to suite any application.
